

Client Meeting 8th March

Showing the first version to the Client

⇒ Client tried to sign

user should create account first then should add accounts(basically we should reverse the order)

⇒ Running a run through the user,child,librarian and admin accounts

→ in adults profile i want an option like books for me and books for my child i don't want to see the child's books on my interface

⇒ think about subscription where is it placed in the order

⇒ we should select the library first then should select book?

⇒ for address you search the community address but not pinning it on the map just like swiggy thing

→ if u order a book then no of books should be reduced

→ liked the quiz idea want it for sure

→ does it really need that big to see in child profile?

→ only isbn should be entered but librarian should not make changes but just should enter the isbn this feature should be implemented for sure

→ in librarian dashboard in issues there is some confusion b/w mark as return and returned once verify it

→ i want to delete a book not yet implemented by librarian.

→ amazon books and goodreads website to get the reviews

→ want author as a collection just to sort the author selection

→ do not want to do seperately for child and adult reviews

→ publisher,author,how is a particular book performing,all these type of analysis

→ page customization regarding the different users

→ there should be some info regarding the site just not the sign in and up pops up for a new user he should be able to understand about it

→ timeline?

→ how my inventory is updated when book is being borrowed ,user book

page,library management isbn no not working, author publisher

schema,subscription schema ,free trail member ship befor home page,(gold silver)

- user comes selects a library, he should be able to see everything but not able to buy because no subscription he checks if his fav books are there then he subscribes
- i want options like shifting of libraries if do not like the books under it
- if my membership it is platinum like u should have a key for it and like youtube playlist subscription
- dynamic pricing, rent, borrow, buy the book is missing
- if a book is searched then i want a library filter too
- i search a keyword like bear
- u open ur netflix it will be diff everyday our app should be dynamically
- if today is holi then i should get books related to it
- if i sort according to education or something how do i know what are the top 5 in that
- the idea of the top 5-10 books is to get more books borrowed(algorithm)
- everyones buys always new ones but netflix bought the old and good ones up and made money and overcame the sales of the cd store(one think about the algorithm)
- on same day with same preferences 2 users are going to see two different pages it should change for same user in a different day(mega feature-1)
- how librarian recomend u the book(mega feature-2)
- should not pay on time on shiprocket and other should account how are u paying
