

Client Meet MoM - 15th March, 2026

Attendees: Team Heads(Guntesh, Khushi) + Client + Mohana Krishna

Suggestion of changes to R1 from client:

ISBN - fetch brings details to pages first, then fix stuff then and there

add tags

Many tags - When u search a book, we get only 1-2 books which is fine, how do u search a similar book? Tags help u there

Want to create quizzes for both physical and eBooks. AI should create the quiz questions every time, fresh

- Site should open at the home page but not logged in. user shouldnt be asked to log in until necessary

About the chatbot:

- Should look through multiple libraries
- Change onboarding questions, ask personalizing questions
- Chatbot shouldnt be available to guests. It should be either on membership or login
- we want to have book recommendation only from those titles which are available in the library
-

How do we make it ready?

- Reviews and comments from Good reads, google reviews, **amazon** reviews.
- Should be able to import books excel sheet, which contains either book name or isbn - if book title not ideal, kill it.
- When adding a book, the data should be brought to the page, free to be edited by the librarian, then a confirmation button will push the book.

- User journey
 - Opening website
 - possibility of subscriptions
 - login
 - profile created
- Option on top right to browse libraries. Home screen should show books from the selected library. By default, closest library is chosen
- Author's page - about the Author, other books
- Publisher's page - Publisher's data, books by publisher
- Filter books by publishers, authors, etc
- Generate tags for each book, which will be used in the chatbot
- 6-7 more questionnaires for personalization in profile building
- Need a shelf and rack attributes in the database.
- bringing LLM for quiz generating book recommendation

codeRabbit - for code reviewing
